

**3M Sponsored Symposium – ESAIC 2022**

# Zero Tolerance to CRBSI: Developing a Patient Safety Culture

**3M** Science.  
Applied to Life.™

**Date:** 4th June 2022 / **Time:** 12:30-13:30 CET / **Room:** Amber 1 & 2

Catheter related bloodstream infections (CRBSIs) are most common among critically ill patients in the ICU and represent a serious, potentially lethal but highly preventable complication. Although improvements have been made in the recent past, CRBSI continues to be a significant patient safety issue. Hence, it is of paramount importance to maintain focus and continuously improve preventive interventions throughout the perioperative patient journey and Beyond
