

Simulation Lab

Procedural Workshops

Learning objectives:

During these 90-min sessions, hands-on training will be provided on a specific procedure. Instructors will demonstrate the skills and then guide, observe, and provide feedback to the participants while they perform the procedure on their own. During the sessions a variety of live model, virtual reality simulators, part task trainers and ultrasound machines will be available, as well as cutting edge multimedia support.

Target audience: Residents, fellows and practitioners interested in improving/rehearsing their skills and knowledge in the field.
